

How **HelpLINE** supports your ITSM – PROBLEM MANAGEMENT

Why Problem Management disciplines are needed

Recurring incidents are a real headache for users and often lead to reduced productivity. Failure to halt the recurrence of incidents leads to lost time and frustrated users. Effective problem management halts the recurrence of incidents and has benefits for the individual and the organisation as a whole.

The goal of Problem Management

To minimise the adverse impact of incidents and problems on your business these are caused by errors within the IT infrastructure.

To prevent recurrence of Incidents related to these errors so that the organisation achieves:

- Accurate overview of known errors
- Insight into weak areas in the IT infrastructure
- More pro-active service support
- Bridging of incident management and change management
- Decrease in support cost because of better IT staff allocation
